

VM DIRECT VIBRATORS

Since 1972 OMB is specialized in designing and manufacturing electric and pneumatic vibrators which meet the specifications required by most fields of application using vibrating equipment. The superior quality and reliability of the OMB vibrators are the result of over thirty-years of vast experience in addition to continuous and constant research and innovation. The most up-to-date training remains a constant in every level of our organisation.

VM direct current electric vibrators have been designed for use in places where mains electricity is not available, and are particularly suitable for hoppers, silos and grilles on self-propelled vehicles (truck mixers, concrete pumps, plaster sprayers, salt sprinklers, gravel spreaders, fertilizer spreaders, truck-mounted silos, sweepers and filters).
